The U.S. lift Truck division based in Cleveland has a expert team experienced in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Originally the home-based lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled forklifts as part of a home-based machinery expansion venture. Sales of these goods were originally targeted to state-run firms, large scale corporations, and the armed forces. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Domestic lift truck trade for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a position of significant expansion of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This project radically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a modern plant which helped establish the company for the fabrication of high added-value goods suitable for export. In 1993, the corporation had a global sales network and started exporting versions they had established through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas marketplaces.
